\* Pressures are balanced to a high degree of accuracy. Values may vary by 0.01 bar due to display rounding.

\* Maximum Velocity of 7,32 m/s occurs in the following pipe(s): (n114-h80)

\*\*\* Device pressure loss (gain in the case of pumps) is calculated from the device's curve. If the device curve is printed with this report, it will appear below. The length of the device as shown in the table above comes from the CAD drawing. The friction loss per unit of length is calculated based upon the length and the curve-based loss/gain value. Internal ID and C Factor values are irrelevant as the device is not represented as an addition to any pipe, but is an individual item whose loss/gain is based solely on the curve data.
